

DAJIN RESOURCES Corp. | TSX-V:DJI | OTCQB:DJIFF | GERMANY:C2U1

A Lithium Exploration Company

About Lithium:

Lithium is considered a key, strategic metal whose growing demand is driven by the clean technology economy – primarily due to advances in electric vehicles, energy storage and electronics. Battery grade lithium carbonate and lithium hydroxide are in great demand and are forecast to exceed global supply by 2025 unless lithium production capacity increases significantly. Lithium extraction from brine sources has gained recent exploration interest, where lithium carbonate production from brine deposits has proven to be more economical than hard-rock mine deposits.

About Dajin Resources Corp.:

Dajin is a Lithium exploration company with prominent lithium brine projects in Nevada and Argentina.

North America's Lithium Hub – Nevada:

- Teels Marsh valley – 7,914 acres (3,202 hectares), 403 placer claims, 100% owned, 8,200 foot (2.5 kilometer) deep basin, located 50 miles (80 kilometers) northwest of Albemarle's Silver Peak Lithium brine mine in Clayton Valley. Surface exploration is complete; road building and pad construction for near term drilling of four large diameter exploration wells is underway. Water rights and drilling permits are in place.
- Alkali Lake valley - 5,591 acres (2,262 hectares), 278 placer claims, 100% owned, located 7 miles (11 kilometers) northeast of Clayton Valley. This project is an early stage exploration project; granting of water rights is in process.

South America's Lithium Triangle – Argentina:

- Jujuy Province - 230,000 acres (93,000 hectares) located in Salinas Grandes and Guayatayoc salars. Dajin Resources S.A. is partnered with LSC Lithium Corporation (LSC-V) who paid \$1,000,000 and has agreed to spend \$2,000,000 to earn a 51% interest in Dajin S.A.'s Lithium properties. LSC is the operator of the agreement and recently released exploration information about results they obtained from Salinas Grandes salar. 60% of samples taken from 25 shallow pits in the northwest portion of the San Jose/Navidad minas returned assay grades in excess of 500 milligrams per liter Lithium and 16% in excess of 800 ml/l Lithium. The peak assay returned 1,353 ml/l Lithium.

Key Executives:

Brian Findlay, President & CEO

Decades of senior management experience in financing and operating companies in the mining industry.

Dr. Catherine Hickson, PGeo, Director & COO

Exploration geologist and science manager with global geothermal and technical experience.

Dr. Mark Coolbaugh, CPG, Director

Metals & geothermal geologist with 30 years of global experience.

Cosme Beccar Varela, LL.B, Director of Dajin Resources S.A., specializing in Mining Law for over 25 years in Argentina.

Stock Information:

Shares issued:	149m
Market capitalization:	\$24M
Warrants outstanding:	7.7m
Incentive stock options:	9.2m
Insider share ownership:	13.5m
